

## Why ENGINEERING?

Because the professionalism of the Engineer is a unique and exceptionally stimulating combination of knowledge and know-how.

The Engineer has the privileged task of transforming the most advanced scientific knowledge into practical, tangible, useful results: concrete works, artifacts, and services. Moreover, he is able to provide answers to the major problems of our time: the competitiveness of economic systems, the sustainable development, the environmental protection, as well as the improvement of the quality of life.

Because Engineering offers a wide range of training and professional development opportunities, which practically embrace the whole spectrum of technical-scientific knowledge, constantly at the cutting edge of the times.

Because Engineering offers extraordinary professional opportunities for a fast job placement into the workplace, and for the reality of the prospects of professional and economic gratification.
